

Hess Spider Stainless Steel Nozzles

- New Option on Hess Blowers
- Stainless Steel nozzle with a 20" foam cone to direct the air flow toward the vehicle
- This keeps the air concentrated on the vehicle to increase soft drying performance
- The foam cone will not harm the vehicle if it comes into contact with the mirror
- Can be ordered as a fixed version, or a pivoting version
- The pivoting version requires pressurized air, and an output from the tunnel controller for controls.
- The pivoting nozzle rotates 45 degrees towards the entrance, from starting perpendicular to the conveyor, and 45 degrees towards the exit when rotated. This allows for increased water flow movement off of the vehicle, plus helps remove water from the back end of vehicles.
- Part Number of the Fixed H816306
- Part Number of the Pivoting H816305
